```
#include <QCoreApplication>

void findValueByName()
{
}

int main(int argc, char *argv[])
{
    QCoreApplication a(argc, argv);

    findValueByName();

    return a.exec();
}
```
Place cursor on call to findValueByName and press Ctrl-Shift –R to rename.

In the Search Results window check Preserve Case.

Place cursur in Replace With field before the B of By. Press delete twice.

Press Replace button. Erroneous result below.

```
#include <QCoreApplication>

void findValue Name()
{
}

int main(int argc, char *argv[])
{
    QCoreApplication a(argc, argv);

    findValue Name );

    return a.exec();
}
```
